Subject index

***Alcaligenes faecalis* S-6**
pseudoazurin of 177
Aldolase isozymes
human, chimeric fusion proteins 101
Alkaline phosphatase
Escherichia coli 273
Escherichia coli, protein structure 605
Amino acid sequence
H^+-ATPase 7
Amino acid usages
in proteins, quantile distributions 729
Amino acids
hydration sites, secondary structure dependence 717
substitution altering the association properties of insulin 527
substitution results in increased insulin stability 519
Amphipathicity
four-α-helix bundles 739
Antibodies
protein engineering, protein structure 229
Antibody–antigen interactions
binding free energies 215
Antigen specificity
murine myeloma proteins 215
α1-Antitrypsin
protein structure of thyroxine-binding globulin compared with 505
Asparaginase II
Escherichia coli, site-directed mutagenesis 785
Asparagine synthetase A
Escherichia coli, single-step purification/protein structure of 279
Aspartic proteinases
protein sequence, protein structure 43
Automated docking algorithm
molecular recognition 69

Bacillus alcalophilus
serine protease from, protein engineering 413
serine protease from, structure determination using subtilisin Carlsberg 405
Bacillus pumilus
chloramphenicol acetyltransferase-86 from, thermostable variants 535
Bacillus stearothermophilus
as host to detect thermostable variants of chloramphenicol acetyltransferase-86 535
lactate dehydrogenase, protein structure 611
lactate dehydrogenase, protein structure, protein stability 769
neutral protease, site-directed mutagenesis 421
Bacillus subtilis
endo-β-1,4-glucanase from, site-directed mutagenesis using *Escherichia coli* 433
neutral protease, glycine to alanine substitutions 543
neutral protease, protein engineering 157, 165
Bacteriophage T4 lysozyme
molecular dynamics simulation, secondary structure 703
Binding free energies
antibody–antigen interactions 215
Binding sites
lysozyme with neutral bromophenol red/ionized bromophenol blue 399
thyroid hormones 61
Bovine pancreatic trypsin inhibitor
protein structure 617
residues (16–36), Monte Carlo simulated annealing, tertiary structure prediction 495
Bovine prolactin
recombinant, site-directed mutagenesis, disulphide bridge mutants 559
Bovine somatotropin
from *Escherichia coli*, signal peptide changes on secretion 511
Brain
cytosol, bovine, protein structure, protein function, similarity to yeast phosphoglycerate kinase 295
Bromophenol blue
binding sites of lysozyme 399
Bromophenol red
binding sites of lysozyme 399
C-terminal
colipase binding 105
Calcium binding
site-directed mutagenesis of human clotting factor IX 489
Catalysis
pancreatic lipase 105
Catalytic triad
α/β hydrolase fold enzymes, protein structure 197
CD4
protein binding to MHC class I and MHC class II 151
CD8
protein binding to MHC class I and MHC class II 151
Cellulose
binding domains, complex proteins purification 361
Chimeric fusion proteins
aldolase isozymes, human 101
Chloramphenicol acetyltransferase-86
from *Bacillus pumilus*, thermostable variants 535
Circular dichroism
far UV, neural network theory 191
Class Mu enzymes
histidine 15 in human glutathione transferase M1-1, site-directed mutagenesis 551
Clostridium pasteurianum
rubredoxin, synthetic gene based on 367
Clotting factor IX
human, site-directed mutagenesis, calcium binding 489
Colipase binding
C-terminal, pancreatic lipase 105
Computer-aided
gene design, protein engineering 821
Cyclophilin
complex with cyclosporin A, structure 391
Cyclosporin A
complex with cyclophilin, structure 391
Cytochrome *c* peroxidase
homology modelling with lignin peroxidase, protein structure 679
Cytosol
bovine brain, protein structure, protein function 295
Cytotoxic activity
murine IL-4 diphtheria toxin-related fusion protein 241

Deletion mutagenesis
by PCR 467
Deoxyhaemoglobin
dithionite, crystal state binding 3
Dihydrofolate reductase
from *Escherichia coli*, protein folding 791
Dimerization
uteroglobin 351
Dimerization domain
of LFB1/HNF1, protein structure 749
Disulphide bridge mutants
recombinant bovine prolactin, site-directed mutagenesis 559
Dithionite
deoxyhaemoglobin, crystal state binding 3
Dynamic programming
protein structure, bovine pancreatic trypsin inhibitor 617
protein structure, peptides 625

Echistatin
solution structure of 473
Endo-β-1,4-glucanase
from *Bacillus subtilis*, site-directed mutagenesis using *Escherichia coli* 433
5-Enolpyruvylshikimate-3-phosphate synthase
overproduction in *Escherichia coli* 461
Enzymes
α/β hydrolase fold, protein structure 197

Escherichia coli
alkaline phosphatase 605
asparaginase II, site-directed mutagenesis 785
asparagine synthetase A, single-step purification/protein structure of 279
bioengineered synthetic chimeric IL-2/IL-6 gene lymphokine overproduction 583
bovine somatotropin, signal peptide changes on secretion 511
dihydrofolate reductase, protein folding 791
expression of recombinant cysteine proteinase 455
expression plasmids 101
β-galactosidase, stability versus magnesium ion concentration 441
human interferon-γ expression 253
inclusion bodies, protein renaturation 593
overproduction of 5-enolpyruvylshikimate-3-phosphate synthase 461
phosphorylase kinase γ subunit catalytic domain expression 811
production of BM 06.022 93
production of human interleukin-1α using site-directed mutagenesis 171
protein A gene 267
quantile distributions 729
recombinant human IGF-1 797
site-directed mutagenesis, D-xylose isomerase active site 235
site-directed mutagenesis of pseudoazurin 177
site-directed mutagenesis, for mapping endo-β-1,4-glucanase 433
snake neurotoxin insertion, alkaline phosphatase 273
structural similarities with HIV-1 139
synthetic gene construction 367
trp-repressor, molecular dynamics, free energy perturbation 759
use in production of human interferon-γ 249
uteroglobin expression 351

Fibrinogen antagonist
echistatin, solution structure 473
Fluorescence
of *Escherichia coli* D-xylose isomerase active site 235
Folding
recombinant human IGF-1 797
Four-α-helix bundles
sequence–structure relationships, protein topology, amphipathicity 739
Free energy perturbation
trp-repressor of *Escherichia coli* 759
Free energy simulations
HIV protease inhibitor binding 29
Fructose-2,6-biphosphate
reactivity with chimeric fusion proteins 101
Fusion protein
murine IL-4 diphtheria toxin-related, mutagenesis 241

β-Galactosidase
defective α-peptide, functional effects 447
from *Escherichia coli*, stability versus magnesium ion concentration 441
Gap penalties
secondary structure, use in protein modelling 35
variable, use in protein modelling 43
Gene design
computer-aided, protein engineering 821
Gene synthesis
recursive polymerase chain reaction 827
Genetic algorithms
zinc finger sequence motif, protein structure 637
Globulin
binding thyroxine 61
Glucomylase
transition state interactions with maltose 185
Glutathione transferase M1-1
human, histidine 15, site-directed mutagenesis 551
Glycine to alanine substitutions
in *Bacillus subtilis* neutral protease, site-directed mutagenesis, protein stability 543

Haemoglobin
human, made in yeast, oxygen-binding, physical properties 807
protein structure 3
Haemolytic activity
pH-dependent, of amphipathic peptide 323
Heme protein
lignin peroxidase, homology modelling 679

Hirudin
inhibitor, interaction with α-thrombin 77
Histidine 15
human glutathione transferase M1-1, site-directed mutagenesis 551
HIV
protease/protease inhibitor binding 29
HIV-1
protease, inhibitor binding to, molecular mechanics analysis, protein structure 659
protein structure, structural similarities with *Escherichia coli* 139
Homology modelling
for protein structure determinations 305
lignin peroxidase with cytochrome *c* peroxidase, protein structure 679
thyroxine binding globulin 61
Homology search
sequence motif dictionary, proteins 479
Hormones
human growth, protein structure 117
thyroid, binding sites 61
Human
clotting factor IX, site-directed mutagenesis, calcium binding 489
glutathione transferase M1-1, histidine 15, site-directed mutagenesis 551
growth hormones, protein structure 117
haemoglobin made in yeast, oxygen-binding, physical properties 807
IGF-1, recombinant, renaturation, folding, protein modelling 797
interferon-γ, site-directed mutagenesis, expression in *Escherichia coli* 249
interleukin-1α, site-directed mutagenesis using *Escherichia coli* 171
Hybrid protein
produced by snake neurotoxin insertion into *Escherichia coli* 273
protein A gene 6-phospho-β-galactosidase 267
Hydration sites
amino acids, secondary structure dependence 717
α/β Hydrolase fold enzymes
protein structure 197
Hydrophobic cluster analysis
protein structure, bovine brain cytosol 295
proteins, secondary structure 629
Hydrophobic effect
molecular surface area 715
Hydrophobicity
protein structure 373

IGF-1
recombinant human, from *Escherichia coli*, protein modelling, renaturation, folding 797
IgG
–mutated IgG-binding protein interactions, based on Protein A from *Staphylococcus aureus* 577
***In vitro* mutagenesis**
and PCR to create permuteins 427
In-frame deletion mutagenesis
murine IL-4 diphtheria toxin-related fusion protein 241
Inhibitor
hirudin, interaction with α-thrombin 77
protease 29
Inhibitor binding
to HIV-1 protease, molecular mechanics analysis 659
Insulin
altering the association properties of insulin by amino acid substitution 527
stability increase through amino acid substitution 519
T⇌R structural transition, targeted energy minimization 669
Integrases
protein sequences 87
Interactions
antibody–antigen, binding free energies 215
Interferon-γ
human, expression in *Escherichia coli* 253
human, site-directed mutagenesis, expression in *Escherichia coli* 249
Interleukin-1α
human, site-directed mutagenesis 171
Interleukin-1β
in vitro mutagenesis and PCR, permuteins 427

Kallikrein
rat tissue, site-directed mutagenesis, structure–function relationships at the substrate binding site 569
Kinetic identification
of transition state interactions, maltose–glucomylase 185
Kringle 2 domains
BM 06.022 93

Lactate dehydrogenase
Bacillus stearothermophilus, protein structure 611
Bacillus stearothermophilus, protein structure, protein stability 769
β-Lactoglobulin
bovine, protein structure, molecular dynamics simulations 17
LFB1/HNF1
dimerization domain, protein structure 749
Lignin peroxidase
homology modelling with cytochrome *c* peroxidase, protein structure 679
Logic-based machine learning algorithm
secondary structure 647
Lymphokine
bioengineered from synthetic chimeric IL-2/IL-6 gene, overproduced in *Escherichia coli* 583
Lysozyme
binding sites of neutral bromophenol red/ionized bromophenol blue 399

Magnesium ion concentration
versus stability, β-galactosidase 441
Maltose
transition state interactions with glucomylase 185
Membrane proteins
16 kDa protein, dicyclohexylcarbodiimide 7
protein modelling 53
protein structure, tryptophan residues 213
voltage-activated potassium channel 285
Membrane structure
16 kDa protein 7
MHC class I
protein binding, CD8 and CD4 151
MHC class II
protein binding, CD8 and CD4 151
Molecular dynamics
trp-repressor of *Escherichia coli* 759
Molecular dynamics simulations
bacteriophage T4 lysozyme, secondary structure 703
bovine whey protein β-lactoglobulin 17
Molecular mechanics analysis
inhibitor binding to HIV-1 protease 659
Molecular recognition
automated docking algorithm 69
Molecular surface area
hydrophobic effect 715
Monte Carlo simulated annealing
of residues (16–36) bovine pancreatic trypsin inhibitor, tertiary structure prediction 495
Murine IL-4 diphtheria toxin-related fusion protein
mutagenesis 241
Murine myeloma proteins
interactions with phosphorylcholine analogues 215
Mutant antibodies
protein engineering, protein structure 229
Mutated IgG-binding protein
–IgG interactions, based on Protein A from *Staphylococcus aureus* 577

Neural network theory
protein structure analysis using far UV circular dichroism 191
Neurotoxin
snake, insertion into *Escherichia coli* 273
Neutral protease
protein engineering 157
Bacillus stearothermophilus, site-directed mutagenesis 421
Bacillus subtilis, glycine to alanine substitutions 543
Bacillus subtilis, protein engineering 165

Oxygen-binding
human haemoglobin made in yeast 807

Pancreatic lipase
catalysis 105
Pancreatic lipase
colipase binding 105
proteolysis 105
Papain
processed from propapain 455
PCR
and *in vitro* mutagenesis to create permuteins 427
deletion mutagenesis by 467
recursive, gene synthesis 827
α-Peptide
defective, in β-galactosidase, functional effects 447
Peptides
amphipathic, protein structure, synthesis, pH-dependent haemolytic activity 323
amphipathic, protein structure 333
dynamic programming, protein structure 625
Permuteins
PCR and *in vitro* mutagenesis of interleukin-1β 427
6-Phospho-β-galactosidase
hybrid protein with protein A gene, *Staphylococcus aureus* 267
Phospholipase
site-directed mutagenesis, X-ray crystallography, protein structure 597
Phosphorylase kinase
γ subunit catalytic domain, expression in *Escherichia coli* 811
Phosphoryicholine analogues
interactions with murine myeloma proteins 215
PIMA algorithm
use in protein modelling 35
Plasminogen activator
tissue-type, mutagenesis 259
Polyalanine
protein engineering 147
Potassium channel
voltage-activated, protein structure, membrane protein 285
Progesterone
binding with uteroglobin 351
Proline
intramembrane 53
Propapain
papain processed from 455
Protease domains
BM 06.022 93
Protease inhibitor
binding, HIV 29
Protein A
Staphylococcus aureus, IgG and mutated IgG-binding protein interactions based on 577
Protein A gene
Escherichia coli 267
hybrid protein with 6-phospho-β-galactosidase 267
Protein binding
CD4 and CD8 to MHC class I and MHC class II 151
Protein engineering
antibodies 229
computer-aided gene design 821
polyalanine backbones 147
serine protease from *Bacillus alcalophilus* 413
with the neutral protease of *Bacillus subtilis* 157, 165
Protein folding
of dihydrofolate reductase from *Escherichia coli* 791
Protein function
bovine brain cytosol 295
Protein fusion
protein A gene–6-phospho-β-galactosidase 267
Protein modelling
membrane proteins, transport proteins 53
PIMA algorithm, secondary structure gap penalties 35
recombinant human IGF-1 797
ROB-1 β-lactamase, site-saturation mutagenesis 693
secondary structure, gap penalties 43
α-thrombin–hirudin complex 77
Protein renaturation
from *Escherichia coli* inclusion bodies 593
Protein Representation Language database
protein structure 377
Protein sequences
aspartic proteinases 43

Protein sequences
data bank merging related protein structure 121
integrases 87
Protein stability
glycine to alanine substitutions in *Bacillus subtilis* neutral protease 543
of lactate dehydrogenase 769
Protein structure
α/β hydrolase fold enzymes, catalytic triad 197
alkaline phosphatase from *Escherichia coli* 605
amphipathic peptide 323, 333
analysis using far UV circular dichroism/neural network theory 191
antibodies 229
aspartic proteinases 43
Bacillus stearothermophilus lactate dehydrogenase 611
bovine anti-testosterone monoclonal antibody 343
bovine brain cytosol, hydrophobic cluster analysis 295
bovine β-lactoglobulin 17
data bank merging related protein sequence 121
determinations by homology modelling 305
dynamic programming, bovine pancreatic trypsin inhibitor 617
dynamic programming, peptides 625
Escherichia coli asparagine synthetase A 279
genetic algorithms, zinc finger sequence motif 637
haemoglobin 3
HIV-1 139
HIV-1 protease 659
homology modelling, lignin peroxidase with cytochrome *c* peroxidase 679
human growth hormones 117
human interferon-γ 253
hydrophobicity 373
lactate dehydrogenase 769
LFB1/HNF1 749
logic-based machine learning algorithm 647
membrane proteins, tryptophan residues 213
modelling, PIMA algorithm 35
phospholipase 597
polyalanine 147
prediction 313
Protein Representation Language database 377
serpins, β-sheet 113
α-thrombin–hirudin complex 77
thyroxine-binding globulin compared with α1-antitrypsin 505
voltage-activated potassium channel 285
Protein topology
four-α-helix bundles 739
Proteins
complex, purification using cellulose-binding domains 361
murine myeloma, antibody–antigen interactions 215
secondary structure, hydrophobic cluster analysis 629
sequence motif dictionary, homology search 479
Proteolysis
pancreatic lipase 105
Proton channel
H^+-ATPase 7
Pseudoazurin
Alcaligenes faecalis S-6 177
Purification
single-step, of *Escherichia coli* asparagine synthetase A 279

Quantile distributions
in *Escherichia coli* 729

Rat tissue kallikrein
site-directed mutagenesis, structure–function relationships at the substrate binding site 569
Recombinant cysteine proteinase
expression in *Escherichia coli* 455
Recombination proteins
integrases 87
Renaturation
recombinant human IGF-1 797
Retinol binding
whey protein β-lactoglobulin 17
Ricin A chain
analysis by site-directed mutagenesis and X-ray crystallography 775
ROB-1 β-lactamase
site-saturation mutagenesis, protein modelling 693

Secondary structure
amino acid, hydration sites 717
bacteriophage T4 lysozyme, molecular dynamics simulation 703
gap penalties, PIMA algorithm, use in protein modelling 35
logic-based machine learning algorithm 647
proteins, hydrophobic cluster analysis 629
use in protein modelling 43
Sequence–structure relationships
four-α-helix bundles 739
Sequence motif
proteins, dictionary, homology search 479
Serine protease
Bacillus alcalophilus, protein engineering 413
Bacillus alcalophilus, structure determination using subtilisin Carlsberg 405
Serpins
protein structure, β-sheet 113
β-Sheet
serpins 113
Signal peptide changes
on secretion of bovine somatotropin from *Escherichia coli* 511
Site-directed mutagenesis
alkaline phosphatase from *Escherichia coli* 605
bovine anti-testosterone monoclonal antibody 343
Escherichia coli asparaginase II 785
Escherichia coli enzyme 235
Escherichia coli, for mapping endo-β-1,4-glucanase 433
glycine to alanine substitutions in *Bacillus subtilis* neutral protease, protein stability 543
histidine 15 in human glutathione transferase M1-1 551
human clotting factor IX, calcium binding 489
human interferon-γ 249, 253
human interleukin-1α 171
kinetic identification of transition state interactions, maltose–glucomylase 185
murine IL-4 diphtheria toxin-related fusion protein 241
neutral protease from *Bacillus stearothermophilus* 421
phospholipase 597
pseudoazurin from *Alcaligenes faecalis* S-6 177
rat tissue kallikrein, structure–function relationships at the substrate binding site 569
recombinant bovine prolactin, disulphide bridge mutants 559
recombination proteins 87
ricin A chain 775
ROB-1 β-lactamase, protein modelling 693
serine protease from *Bacillus alcalophilus* 413
T4 phage lysozyme, triple point mutation 781
tissue-type plasminogen activator 259
Site-saturation mutagenesis
of ROB-1 β-lactamase, protein modelling 693
Solution structure
of echistatin 473
Stability
versus magnesium ion concentration, β-galactosidase 441
Staphylococcus aureus
6-phospho-β-galactosidase 267
Protein A from, IgG and mutated IgG-binding protein interactions based on 577
Subtilisin Carlsberg
structure determination using, for serine protease from *Bacillus alcalophilus* 405
Synthesis
of amphipathic peptide 323
Synthetic chimeric IL-2/IL-6 gene
synthesized to produce bioengineered lymphokine, overproduced in *Escherichia coli* 583
Synthetic gene
based on *Clostridium pasteurianum* rubredoxin, construction in *Escherichia coli*, expression using T7 RNA polymerase/promoter system 367

T4 phage lysozyme
site-directed mutagenesis, triple point mutation 781

T7 RNA polymerase/promoter system
synthetic gene expression using 367
T ⇌ R structural transition
insulin, targeted energy minimization 669
Targeted energy minimization
insulin, T ⇌ R structural transition 669
Tertiary structure prediction
residues (16–36) bovine pancreatic trypsin inhibitor, Monte Carlo simulated annealing 495
Testosterone
bovine anti-, site-directed mutagenesis 343
Thermostable enzymes
lactate dehydrogenase, protein structure 769
α-Thrombin
interaction with hirudin inhibitor 77
Thyroid
hormones, binding sites 61
Thyroxine-binding globulin
homology modelling 61
protein structure compared with α1-antitrypsin 505
Transition state interactions
maltose with glucomylase 185
Transport proteins
protein modelling 53
Triple point mutation
T4 phage lysozyme, site-directed mutagenesis 781
***trp*-repressor**
Escherichia coli, molecular dynamics, free energy perturbation 759
Tryptophan residues
membrane proteins, protein structure 213

Uteroglobin
expression in *Escherichia coli*, dimerization, binding with progesterone 351

Whey protein
β-lactoglobulin, molecular dynamics simulations 17

X-ray crystallography
phospholipase 597
ricin A chain 775
D-Xylose isomerase
fluorescence, *Escherichia coli* 235

Yeast phosphoglycerate kinase
similarity to bovine brain cytosol 295

Zinc finger sequence motif
protein structure, genetic algorithms 637
